

Catch Telecom Limited provides Telecoms Consultancy and Account Management services to businesses across the UK. Our portfolio of expertise includes all mobile communications products and services, landline & broadband solutions and business telephone systems from small single site office configurations to large complex solutions for single and multi-site operations.

TELECOMS CONSULTANCY and ACCOUNT MANAGEMENT

Consultancy

Catch Telecom's initial consultation meeting is to get to know you and your business. We will assess your telecoms arrangements and determine your needs and requirements going forward. We will undertake a cost analysis and audit of your current providers' charges and in conjunction with your ongoing requirements we will endeavour to meet your needs and formulate a proposal demonstrating savings that can be achieved.

Independent Advice

Catch Telecom is completely independent. This means we are always able to compare all the network services, tariffs and products to ensure you have all the options to consider.

Account Management

If successfully appointed as your account managers we will provide ongoing day to day support with any information, advice, queries or requirements you may have. Furthermore we will provide regular account reviews as required and full assessments at the time that the contract is due for renewal. These reviews will also ensure that our clients are benefitting from the most cost effective packages available to them and are informed regularly of new products and services in this very fast moving and changing environment.

We provide our Consultation and Account Management services at **no cost** to you. Our motivation and incentive is to find and recommend the right solution at the right price so that we are appointed to act as your preferred telecoms services supplier.

MOBILE PHONE SOLUTIONS

Mobile Networks

We are fully independent and we work for our clients, not the network operators. This means we always work in our client's best interest providing them with information, comparisons and advice on all the available options.

Mobile Phones

Whether you are looking for smart executive phones or rugged handsets for tough working environments we can supply the right device to meet your requirements. We supply all makes and models of today's mobile telephone devices from all the leading manufactures including BlackBerry, Apple, HTC, Nokia and Samsung.

Mobile Email

With the cost of mobile email solutions becoming increasingly more competitive, mobile email solutions are now more affordable and enable businesses to increase workforce productivity and efficiency. We provide advice and products for BlackBerry, Windows Mobile and Apple solutions.

Mobile Broadband

More people are working on the move or away from their home and office. Mobile Broadband has therefore become an essential and now more affordable 'must have' service. With high-speed access from 3.6mbps to the new 21.6mbps we can provide a solution to meet your needs.

FIXED LANDLINE SERVICES

Service Providers

We are approved business partners for the leading UK landline telecoms providers and can offer highly competitive rates on calls, line rental and business broadband. Many businesses can make significant savings, as much as 50% or more with alternative routing of calls and line rental.

Carrier Pre Select (CPS)

CPS enables the routing of both domestic and international calls across different suppliers at lower cost and without the need to dial any prefix.

Line Rental

We provide new or manage existing Analogue, ISDN2 and ISDN30 and SIP trunk services all at highly competitive rental costs.

Non Geographic Numbers (NGN)

If you use or require local, national or premium rate NGN numbers i.e. 03xx, 08xx and 09xx numbers, we can supply these on very competitive tariffs and/or rebates where applicable.

Fixed Cellular Terminal (FCT)

'Office to mobile' calls can be a major cost on landline bills. We can help you significantly reduce your costs with cellular gateways such as FCT's. These devices are available for Analogue, ISDN2 and ISDN30 and when connected to a compatible telephone system they route calls dialled to '07' mobile numbers across the mobile networks. These calls are then far most cost effective than if they were routed across the PSTN resulting in significant savings.

TELEPHONE SYSTEMS

Whether you are looking for the latest cutting edge traditional PBX based telephone system or considering the benefits of a hosted VoIP application then Catch Telecom can supply the right business solution for you. Catch Telecom are able to provide telephone system solutions from small start up businesses to large complex multi-site systems and can provide ongoing support and maintenance services.
